

# Web Tools Assignment

For this assignment:

1. Select **TWO** of the web tools introduced in Module 13 to work with.
2. Create a project on each of them.
3. Get the embed code, and then embed both creations into a blog post and on your Weebly website. The title on each of those sites should be “Web Tools Exploration”.
4. For your projects, your task is to use the tools to teach someone else how to do something. You will use that tool effectively so that someone watching it on your blog, or website can learn how to do that thing. What you teach through your project should be related to the theme of your website.

\*\*For ideas, think about something fairly simple that you know how to do – such as making a great sandwich, riding a bike, speaking a few words of a foreign language, getting started dog mushing, or anything you are interested in that you think would be a fun and simple concept to teach. You may use the same idea in both tools, but of course it will look somewhat different depending on what tools you choose.
